Professional Summary

Software Development Engineer with 2+ years of experience developing Java and Spring Boot applications, REST API integrations, deployment automation, and production support. Experienced in building reliable, maintainable, and scalable software components using Java, Python, Docker, CI/CD, Kafka, and relational databases. Strong hands-on background in code reviews, debugging, root-cause analysis, automated testing workflows, controlled releases, and event-driven/distributed application design, with measurable improvements in engineering efficiency and software quality.

Technical Skills

Programming Languages: Java (Primary), Python , HTML
Backend: Spring Boot, REST APIs, AWS, Kafka, Docker, CI/CD
Databases: MySQL, PostgreSQL, MongoDB
Data & Analytics: Excel, Tableau, Alteryx

Experience

COGNIZANT · Travelers Insurance - Bengaluru, India July 2024 – Present
Software Development Engineer

- Develop and maintain **clean, reliable, and maintainable Java-based business logic codes**, with methods validating routing logic, and server side workflows, perform impact analysis, testing, and code reviews to maintain a post-deployment **defect rate 0.1%**.
- Developed and containerized **Spring Boot application** for a platform upgrade using Docker, Maven, HTTP integrations, and environment specific configurations, creating a more **repeatable and consistent implementation and deployment process** across environments and improving testing and migration efficiency by **30%**.
- Engineered **automation tools for repetitive engineering activities**, including code generation and pull-request analysis, reducing processing time, also developed a Python-based workflow to automate Jira intake, business-rule artifact configuration, and XML, JSON, and SOAP testing through PowerShell automation and Swagger UI, reducing manual effort by **40%**.
- Diagnose and resolve application defects, deployment failures, API issues, and environment-related problems through **debugging, log analysis, monitoring, and root cause analysis**, resolving **application and deployment issues** while working with cross-functional teams.
- Contribute to **REST API integrations, code reviews, CI/CD workflows, functional testing, UAT deployments, Jira tracking, and production-release validation**, helping ensure software changes meet functional, operational, and quality requirements before controlled releases.
- Being part of an **automated release and deployment solution** for integration, UAT, and production environments, standardizing repeatable deployment activities, accelerating production-day application validation, and reducing manual intervention and operational risk.

Data Analyst Intern

- Transformed raw business data into actionable insights through automated workflows, interactive dashboards, and data visualization, supporting data-driven reporting and decision-making.
- Worked with **SQL, Power BI, Excel, Tableau, Python, and Alteryx** to analyze data sources and metrics and improve reporting efficiency.

Projects

AxeDrobe – E-Commerce Order Management System GitHub | Live

- Built a full-stack e-commerce platform using five independent services for **authentication, product management, order processing, inventory tracking, and notifications**, with secured REST APIs using Spring Security, JWT, and role-based access control.
- Implemented an **event-driven distributed order workflow with Apache Kafka, enabling asynchronous inventory updates and notifications** while keeping services loosely coupled and independently maintainable.

AxePower – Windows System Optimization Utility GitHub | Live

- Engineered a modular Windows application using **.NET 8, C# 12**, and MVVM, applying domain-driven design, dependency injection, and separation of concerns for maintainable development, implimented **login authentication with Supabase database**.
- Implemented asynchronous system workflows for power-profile automation, bulk software removal with residual scanning, driver management, Android mirroring, and real-time hardware monitoring.

AuraTube – Video Utility Platform GitHub

- Built a React and FastAPI video-processing platform with REST APIs and Server-Sent Events for real-time progress tracking, plus Google Drive uploads through **OAuth 2.0**.

SyncNotes – Sync Browser and Mobile Notes GitHub | Download

- Built a lightweight Chrome Extension enabling contextual, draggable floating notes on any webpage with auto-saving offline storage.
- Implemented **P2P mobile-to-browser sync via QR pairing**, alongside client-side text extraction from PDF, DOCX, and images (OCR).

Education

Bachelor of Technology in Mechanical Engineering **CGPA: 8.8** | 2019–2023
Dr. B.C. Roy Engineering College, Durgapur, West Bengal
